Q [0024] Figure 5 is an exploded view of one embodiment of a breakaway sign post assembly 80 including an anchor member 82, a breakaway connector 84, and a support member 86. Anchor member 82 includes a ground anchor connector 88 and an anchor plate 90. Ground anchor connector 88 is elongated and has a generally square cross-section. Furthermore, connector 88 includes an opening 92 (shown in ~~Figure 7~~ Figure 6) extending through the length thereof, a first end 94, a first end wall 96, and a first end face 98. Alternatively, connector 88 may have a variety of other shapes including, but not limited to, L-shaped, circular, U-channel or flanged beam cross sections. Anchor plate 90 is attached to first end wall 96 of ground anchor connector 88 adjacent first end 94. More specifically, anchor plate 90 is spaced from first end face 98, such that anchor plate 90 and first end wall 96 form the boundaries of a recess 100 within first end 94 of ground anchor connector 88. In the exemplary embodiment, recess 100 is generally square and includes filleted corners. Alternatively, recess 100 is defined by a variety of other shapes, including, but not limited to, rectangular, circular, or triangular shapes.
